SOFTWARE ENGINEER (MOBILE, WEB, BACKEND, & CLOUD)

Senior Software Engineer who builds complete digital products from start to finish. I specialize in the four pillars of modern software: mobile apps, web interfaces, robust servers, and reliable cloud infrastructure. I focus on creating fast, scalable systems that can easily handle heavy load/usage without problems.

CORE SKILLS

- **Backend & Data:** Go (Golang), Python, Node.js, Nest.js, Express.js, Redis, MySQL, PostgreSQL, MongoDB, Pub/Sub, Kafka, RabbitMQ
- **Web & Mobile:** React, Next.js, React Native, Redux, D3.js, Tailwind CSS, WebSockets, Rest APIs, Svelte
- **Cloud & DevOps:** AWS (EKS, S3, CloudFront), Docker, Kubernetes, Terraform, Ansible, GitHub Actions, Jenkins, CI/CD, Automated Testing Frameworks (Cypress, Playwright)
- **Architecture:** Microservices, GraphQL Federation, Event-Driven, Domain-Driven Design (DDD), Offline-First Architecture

PROFESSIONAL EXPERIENCE

NexaLabs LTD Jun 2026 – Present
Owner & Software Engineer (Mobile, Web, & Backend)

- Launched multiple digital products from initial idea to public release by directing the technical strategy and development for a software publishing business.
- Ensured reliable system performance by architecting complete systems that connect mobile and web interfaces to secure cloud infrastructure.
- *Environment: Golang, TypeScript, NestJS, React Native, Next.js, Docker, Cloudflare, AWS, Python*
- https://nexalabs.site

DoneThat: Sync Feb 2026 – Present
Owner & Software Engineer (Mobile, Web, & Backend)

- Enabled instant cross-device synchronization of household tasks by building a real-time React Native mobile application.
- Eliminated data delays and manual refreshes by designing a fast, reliable server backend with WebSockets and PostgreSQL.
- *Environment: React Native, Golang, WebSockets, PostgreSQL, Coolify, AWS, Docker*
- https://donethat.online

Bible Words: Play Aug 2025 – Present
Owner & Software Engineer (Mobile, Web, & Backend)

- Maintained 99.9% uptime for 10,000+ concurrent players by engineering a highly reliable backend server system.
- Accelerated global game load times by 40% by provisioning optimized cloud infrastructure on AWS.
- *Environment: React Native, Golang, Docker, AWS S3, AWS CloudFront, Python*
- https://play.lolaschools.com

LOLA - JAMB & WAEC PREP Sep 2024 – Aug 2025
Owner & Software Engineer (Mobile, Web, & Backend)

- Facilitated national exam success for over 90% of enrolled students by leading the technology strategy for the educational platform.
- Accelerated live message and video transmission by 65% by upgrading the real-time tutoring architecture.
- *Environment: React Native, Node.js, JSON APIs, WebSockets, PostgreSQL, Python, Docker*
- https://lolaschools.com

LifeApp Mar 2024 – May 2024
Backend & Cloud Engineer (Contract)

- Processed 1 million+ daily user actions with a 60% increase in application speed by designing a scalable server system.
- Increased new feature launch speed by 50% by automating the backend CI/CD release pipeline.
- *Environment: Go, Python, AWS (EKS), CI/CD, Kubernetes*

BioCatlog Aug 2022 – Mar 2023
Senior Software Engineer (Mobile, Web, & Backend)

- Supported 50,000+ daily active users by managing the end-to-end development of a high-traffic web application.
- Boosted application speed by 70% for end-users by optimizing data retrieval operations via Redis and GraphQL.
- *Environment: React, Next.js, Node.js, GraphQL, Redis, Docker, Python*

SynOption Sep 2021 – Aug 2022
Web Engineer

- Secured $10 million+ in daily transactions by helping build a robust financial trading platform.
- Broadened accessibility for users on slow connections by shrinking the mobile application's download size by 60%.
- *Environment: React, TypeScript, Redux, Tailwind CSS*

ProDevs Sep 2020 – Aug 2021
Software Engineer (Mobile & Web)

- Delivered 100,000+ daily notifications flawlessly by building a dependable automated alert system.
- Reduced production application errors by 80% by creating an automated testing process that caught bugs before release.
- Retained seamless usability for 50,000+ users during internet drops by developing an offline-first mobile feature.
- *Environment: React Native, Node.js, Express.js, Cypress, Playwright, Docker, Python*

GidiJobs Sep 2019 – Jul 2020
Software Engineer (Web)

- Cut web page load times by 35% for thousands of daily visitors by optimizing database search queries.
- *Environment: React, MySQL, Node.js*

Bethesda Child Support Foundation Jan 2018 – Jun 2018
Software Engineer Intern (Web)

- Streamlined educational and needs tracking for 500+ sponsored children by building a digital management system.
- Eliminated manual paperwork by automating payment tracking and application processes into a fast digital platform.
- *Environment: JavaScript, HTML/CSS, MySQL, Node.js*

EDUCATION

BSc, Computer Science – Southwestern University (2024)
Diploma in Software Development & Digital Design – Ekobits Academy (2019)
